<b>CERFACS2</b> : documentation in progress	<a href="#">Barthelet et al. 1998a,b</a>	none	80	353	1370	
<b>COLA1:</b> <a href="#">documentation</a>	<a href="#">Schneider et al. 1997</a> , <a href="#">Schneider &amp; Zhu 1998</a>	none	50	345	1365	
<b>COLA2:</b> <a href="#">documentation</a>	<a href="#">Dewitt &amp; Schneider 1999</a>	none	191	345	1365	long transient
<b>CSIRO</b> +: <a href="#">documentation</a>	<a href="#">Gordon &amp; O'Farrell 1997</a> , <a href="#">Hirst et al. 2000</a>	heat, water, momentum	100	330	1367	
<b>DOE PCM</b> +*** : documentation in progress	<a href="#">Washington et al. 2000</a>	none	300	355	1367	
<b>ECHAM1+LSG:</b> <a href="#">documentation</a>	<a href="#">Cubasch et al. 1992</a> , <a href="#">von Storch et al. 1997</a>	heat, water, momentum	960			temperature time-series data only
<b>ECHAM3+LSG</b> **: <a href="#">documentation</a>	<a href="#">Cubasch et al. 1997</a> , <a href="#">Voss et al. 1998</a>	heat, water, momentum	1000	345	1365	no flux-correction fields

<b>ECHAM4+OPYC3+:</b> <a href="#">documentation</a>	<a href="#">Roeckner et al. 1996a,b</a>	heat, water (annual mean)	150	353	1365	
<b>ECHAM4+HOPE-G(ECHO-G)+:</b> <a href="#">documentation</a>	<a href="#">Legutke&amp;Voss 1999, Min et al. 2004</a>	heat, water (globally normalized to zero)	100	353	1365	
<b>GFDL_R15_a:</b> <a href="#">documentation</a>	<a href="#">Manabe et al. 1991, Manabe &amp; Stouffer 1996</a>	heat, water	1000	300	1353.5	
<b>GFDL_R30_c + :</b> documentation in progress	<a href="#">Delworth et al. 2002, Dixon et al. 2003</a>	heat, water	300	360	1365	
<b>GISS (Miller):</b> <a href="#">documentation</a>	<a href="#">Miller &amp; Jiang 1996</a>	none	89			
<b>GISS (Russell):</b> <a href="#">documentation</a>	<a href="#">Russell et al. 1995, Russell and Rind 1999</a>	none	98	315	1367	no decadal standard deviations or barotropic stream function
<b>IAP/LASG1:</b> <a href="#">documentation</a>	<a href="#">Wu et al. 1997, Zhang et al. 2000</a>	<i>sea sfc salinity restored to obs</i>	50	345	1367.04	
<b>IAP/LASG2:</b> documentation in progress	<a href="#">Wu et al. 1997, Zhang et al. 2000</a>	heat, water, momentum	80	345	1367.04	
<b>INMCM:</b> documentation in progress	<a href="#">Diansky et al. 2002, Diansky &amp; Volodin 2002</a>	none	80	348	1365	
<b>LMD/IPSL1:</b> <a href="#">documentation</a>	<a href="#">Braconnot et al. 1997</a>	none	24	320	1367	no decadal standard deviations
<b>LMD/IPSL2:</b> documentation in progress	<a href="#">Laurent et al. 1998, Leclainche et al. 2000</a>	none	80	320	1367	
<b>MRI1:</b> <a href="#">documentation</a>	<a href="#">Tokioka et al. 1996</a>	heat, water	100	345	1365	no ocean heat transport data available
<b>MRI2:</b> documentation in progress	<a href="#">Tokioka et al. 1996</a>	heat, water	80	345	1365	
<b>MRI3 + :</b> documentation in progress	<a href="#">Yukimoto et al. 2001, Yukimoto &amp; Noda 2003</a>	heat, water	150	345	1365	
<b>NCAR (CSM) +:</b> <a href="#">documentation</a>	<a href="#">Boville &amp; Gent 1998</a>	none	300	355	1367	
<b>NCAR (CCSM2) + :</b> documentation in progress	<a href="#">Buja &amp; Craig 2002</a>	none	650	355	1367	
<b>NRL1 :</b> <a href="#">documentation</a>	<a href="#">Hogan and Li 1997, Li &amp; Hogan 1999</a>	<i>sea ice prescribed to obs</i>	36			

<b>NRL2</b> : documentation in progress	<a href="#">Hogan and Li 1997, Li &amp; Hogan 1999</a>	heat, water (annual mean)	3			perturbed run is 80 years
<b>UKMO(HadCM2) +:</b> <a href="#">documentation</a>	<a href="#">Johns 1996, Johns et al. 1997</a>	heat, water	80	322.6 (equiv.-CO <sub>2</sub> )	1365	
<b>UKMO(HadCM3) + :</b> documentation in progress	<a href="#">Gordon et al. 2000</a>	none	80	289.6	1365	
<b>YONU</b> : documentation in progress	<a href="#">AMIP documentation</a>	<i>sea ice prescribed to obs</i>	80			

\* CMIP1 runs are control experiments with *seasonal-mean* climatological output data. CMIP2 runs are *paired* control and perturbed (1%-per-year increasing carbon dioxide) experiments with [\*annual-mean climatological output data\*](#). In cases that are coded **red**, essentially the same model version used to produce the CMIP1 control run also produced the paired CMIP2 runs. In other cases, a given model version produced only the CMIP1 (coded **black**) or only the CMIP2 runs (coded **cyan**). In addition, models that are participating in the [CMIP2+ initiative](#) (designated by a '+' in column 1) are making available essentially all their history tape data.

For further information on models that are coded **black** or **red**, see the CMIP Model Features Documentation (at <http://www-pcmdi.llnl.gov/modeldoc/cmip/>) or, for a particular model, the associated "documentation" link in column 2 of the above table. (Documentation of the features of the **cyan-coded** models is in progress.) The IPCC Third Assessment Report (2001) also gives further details on selected features of CMIP models.

\*\* Note that in models with heat flux corrections, the surface temperature is influenced less by the specifications of CO<sub>2</sub> concentration and solar constant than is the case for models without such flux corrections. Also, the radiative forcing perturbation is determined primarily by the logarithm of the ratio of transient-to-control CO<sub>2</sub> concentrations, rather than by the control concentration *per se*.

\*\*\* Subproject access to full dataset requires extra permission.
